Time for Action: Summer 2020

In this issue of Perennial Pages we have our regular features, including a look at a rose bush and a bed of trillas. We also have a video about the Delaware Estuary Program. You can watch it on our Facebook page or Instagram TV. Every week we feature a new video about invasive species, and this week we’re focusing on black currant. We hope you enjoy it!

For more details about the Delaware Estuary Program, please visit their website or email them directly.

Facts

The rose bush in the picture is a Rosa virginiana, also known as the American wild rose. It is native to the United States and is a hardy shrub that can survive in a wide range of conditions. The flower is typically pink, and the fruit is a small, round, red berry. The rose is a popular garden plant and is often used in landscaping. It is also used in cooking and as a source of tea. The rose is also known as the state flower of Delaware and is a symbol of love and beauty.

The Delaware Estuary Program is a science-based and community-driven organization that works to improve the health of the Delaware Estuary. The program is funded by the Delaware Estuary Partnership, a group of federal, state, and non-profit organizations. The program works to protect and restore the estuary’s natural resources, including the water, the soil, and the air.

The program has a number of ongoing projects, including a program to reduce the amount of pollution that enters the estuary. The program also works to restore the natural habitats of the estuary, including wetlands and forests. The program also works to educate the public about the importance of the estuary and how they can help to protect it.

The Delaware Estuary Program is based in Richmond, Virginia, and is headed by Richard Hodnett.

Stay tuned for more updates from Perennial Pages!

Enjoy!
